

the committed-wrong survivor population (every filter passed, still wrong)

×

1 · rendering quality (teeth)
uniform across survivors — killed

×

2 · mention multiplicity
flat — killed

×

3 · omission blindness
dead — killed

×

4 · suspicion transplant
flat — killed

×

5 · binding-field enrichment
runs backwards (de-enriched) — killed

→

6 · **THE MECHANISM NAMED: the routing wall**
states 99.6% correctly decodable; the pointer is mis-aimed

\$

7 · perfect-oracle repair
ceiling 13.9% — even perfect flags cannot re-aim a pointer

\$

8 · monitor-gated ratchet
leak found and fixed: 6% — retired

\$

9 · input-mark beacon
3.0% at precision 0.165 — does not graduate

the wall, priced: detect-and-abstain — a measurement, not a surrender
nine registered refutations · four laws · two retired builds · one working instrument · one closed population

× hypothesis killed at its registered bar → mechanism named \$ repair priced (and declined)
